

# SBP Maintenance Guide

## DO

- Check for highly reflective surfaces. Such surfaces can bounce intense heat and melt your grass.
- Give your grass a quick clean of debris at least once per month (Ideal tool for this is our artificial grass power brush/Hoover please ask for details)
- Like real grass heavy use may produce some areas to look a little depressed or flattened, just use a stiff Broom or Mechanical brush (Ideal tool for this is our artificial grass power brush/Hoover please ask for details)
- Imprints of garden furniture will lift naturally but as above this will help quicken the process.
- Wash your artificial grass if animals' urine on the grass please only use products designed for artificial grass these can be found using amazon.
- Protect your grass if painting surrounding areas
- If airborne spore/seeds occur both on the edgings and grass simply pluck them out and use a gentle weed killer

## DO NOT

- Place any reflective products near the artificial grass that could beam sun onto this
- Place any glass product on the grass, this can cause melting
- If using a paddling pool on the artificial grass use a mechanical pump to release the water off the artificial grass
- Do not bbq on your artificial grass or set fireworks off
- Do not allow your animals to dig at the artificial grass
